SOLIDWORKS Educational Product. For Instructional Use Only.

Mobile Lectern Process Router

Panels

Process	Machine/Tool	Comments
Cut the Tempered Hardboard into shape	Full Spectrum PS48 Laser Cutter	Panel 1: Cut one panel according to the dimensions specified in Drawing Sheet 2. Panel 2: Cut one panel according to the dimensions specified in Drawing Sheet 4. Panels 3–5: Cut three (3) identical panels according to the dimensions specified in Drawing Sheet 3. Cut all at the following settings: Speed = 60%, Power = 100%, Current = 100%, Passes = 1
Place the contact paper onto the Tempered Hardboard and cut the contact paper into the shape of the wood	Exacto knife	Roll out enough contact paper onto the table—at least one thumb width length of contact paper that borders the hardboard—prior to making a cut. If contact paper is not sticking onto the surface, use wood glue to secure the contact paper onto the wood.
Superglue the magnets onto the contact paper	Superglue	Refer to Drawing Sheets 2 and 4 to locate where to place magnets.
Cut the grip tape to fit the bottom and top of the panels	X-Actoknife	Ensure that there is a sufficient amount of grip tape laid out onto the table when cutting. It is recommended to make the cut with the panel already pre-attached to the grip tape to maximize accuracy.
Assemble the lectern	N/A	Assemble the 5 panels according to Drawing Sheet 1. Slide each panel into their respective slits.
Attach the duct tape into the inner corners of the lectern	Scissors	Using the small strips of duct tape, connect two perpendicular panels together at the bottom of the inner lectern. All corners should have a piece of duct tape that is loosely attached to ensure that the lectern is able to fold without disassembling.

Mobile Lectern Process Router

Wings

Process	Machine/Tool	Comments
Cut the popsicle stick into shape	X-Actoknife	Remove 0.74 in from the end of the popsicle stick by making an angled cut with a sloped length of 0.82 in
Place the contact paper onto the popsicle stick and cut the contact paper into the shape of the stick	X-Actoknife	Roll out enough contact paper onto the table—at least one thumb width length of contact paper that borders the popsicle stick—prior to making a cut. If contact paper is not sticking onto the surface, use wood glue to secure the contact paper onto the stick.
Superglue the magnets onto the contact paper	Superglue	Ensure that the magnets are placed according to Sheets 5 and 6. The side that is not being glued down can be magnetically attached to the magnets on the panel.

Bill of Materials					
Item	Part Number (ASIN)	Manufacturer	Quantity	Price per unit (\$)	Total cost for part (\$)
1/8 in.x 2ft.x4 ft. Tempered Hardboard Project Panel	SKU619375	Prowood	1	\$7	\$7
Contact Paper (Grey) 15.75 Inch	B07H2766XP	practicalWS	1	\$9.43	\$9.43
Rubber Grip Tape	B0DPHYGJ7N	Yorwe	1	\$1.50	\$2.50
Magnets	B0BDFFCSKT	DIYMAG	20	\$0.08	\$1.66
